

Enfuselle® Eye Treatment Clinical Results

Title of study

Dramatically improves the texture and resilience of eye-area skin.

Abstract

Enfuselle Eye Treatment was evaluated under clinically controlled conditions. Twenty-three men and women between the ages of 30 and 70 used Enfuselle Eye Treatment for a period of 84 days. The product was applied to the skin around one eye, in a controlled and supervised manner. The skin around the other eye area served as the control. The treated and untreated sides were randomized to avoid bias. Subjects were only allowed to cleanse the untreated side with their normal cleanser. No makeup or other skin care products were worn. Approximately 50% of the panel were contact lens wearers.

120% increase in skin resilience and firmness in 14 days.*

209% decrease in visible fine lines of the skin in 56 days*

223% decrease in appearance of skin wrinkles in 14 days*

32% decrease in retained skin moisture in 56 days*

A **definitive** evening of skin tone in 84 days*

A board-certified dermatologist and ophthalmologist at the independent laboratories of the California Skin Research Institute evaluated the safety of Enfuselle Eye Treatment. They found that, under the conditions of the test, the product was safe for use, even by contact lens users.

Conclusion

Enfuselle Eye Treatment significantly improves skin firmness and resilience and significantly reduces the visible signs of aging.

**Some of the Enfuselle clinical studies utilized contralateral (half-face) studies. Bioinstruments were used to objectively measure the depth of fine lines and wrinkles on one side of the face where Enfuselle was being applied and compared these results to the control side where no skin care products or make up were used. The results of the tests, due in part to the rapidly changing climate conditions, were extraordinary: Where no skin care or cosmetic products were used, the visible signs of aging became measurably deeper, while the skin treated with Enfuselle products steadily improved. In addition to bioinstrumentation, subjects completed a detailed questionnaire following the tests subjectively rating the products' results.*
